

Deco Interior Installation Addendum

This addendum is only for installation of the Deco style interior. Please review all installation instructions before beginning. Front wall has been eliminated from the photos to show more details.

First secure the bench supports to the walls. There will be a pencil mark and labels showing where the top of the supports will be placed. Note: the heater should be hooked up before beginning the bench installation. Once all supports are in place, install the decking (bottom bench) starting with the heater side. The hole for the bowl/dish may or may not be in the bench depending on the room configuration. Next install the other side decking.

Third, put the middle decking into place. Once the decking is set, the upper (modular) benching can be placed on top. (Middle deck is removable for cleaning.)

Note: The legs shown on the bottom benches are used for photo purposes and will not come with the room. Instead there will be front wall supports that the decking will rest on.
